>Overview

Comprehensive security for web, email, and data loss prevention

McAfee Content Security Suite bundles McAfee Web Protection, McAfee Email Protection, McAfee Network DLP Prevent, and McAfee Device Control into a one-suite purchase. This unified approach offers the right security to protect your users and data from today's inbound and outbound threats:

- Protect against blended and targeted malware attacks
- Eliminate spam, malware, phishing attacks, and other email-borne threats
- Reduce bandwidth and malware cleanup costs while increasing employee productivity
- Navigate the web safely without fear of phishing, spyware, targeted attacks, or data loss
- Prevent loss of both structured (credit card numbers) and unstructured data (financial records or blueprints) across the entire enterprise
- Assist in achieving industry and regulatory compliance

McAfee Content Security Suite bundled solutions

- **McAfee Web Protection**—Combines advanced web security, controls, and deployment flexibility, whether you are looking for the control of an onsite solution with McAfee Web

Gateway, the ease of Security-as-a-Service (SaaS) management with **McAfee SaaS Web Protection**, or a hybrid combination of the two

- **McAfee Email Protection**—Provides the ultimate in security and flexibility; delivered from McAfee Labs, providing the most comprehensive Global Threat Intelligence
- **McAfee DLP Prevent**—Helps customers enforce safe data-handling policies for information leaving the boundaries of their network; integrates with McAfee Email Protection and McAfee Web Gateway solutions, as well as most commercial Internet gateway security technologies for email, web, IM, and other network applications
- **McAfee Device Control**—Helps customers monitor and restrict data copied to removable storage devices and media so their data stays protected under company control

>Key Features

Integrated solutions

- McAfee provides intelligent solutions that work together to provide protection against email, web, blended threats, and data loss

Protection for all data, all the time, everywhere

- Integration between DLP and other McAfee products and data protection products provide seamless data security
- Rated #1 anti-malware protection by leading third-party testing lab AV-Test.org

Superior anti-spam capabilities

- 99%+ spam detection with low false positives

Unmatched security and global threat intelligence

- McAfee research spans all threat vectors: malware, web security, spam/phishing, host and network intrusion prevention systems (IPS), IP reputation, vulnerability analysis

>Customer Problems Solved

- Multiple standalone security solutions result in inconsistent policy enforcement, incomplete reporting
- Wants to enable access to web and email applications without exposing the network and endpoints to security risks, data loss, and incurring significant cleanup costs
- Increasing management and operational costs due to multiple vendors
