

Adobe FrameMaker 7.0

Adobe FrameMaker 7.0 is the software of choice for enterprises that need to rapidly and efficiently publish information across diverse platforms to multiple channels, including XML, HTML, Adobe PDF, print and SGML. FrameMaker 7.0's robust and flexible publishing functionality is tailored to the creation and management of both basic and complex documents.

FrameMaker Server 7.0 software lets you produce personalized, accurate and high quality content for print and Adobe PDF output. You can deliver Adobe PDF files to a Web browser or file server, or stream PostScript files directly to a printer.

Adobe FrameMaker 7.0 Solutions Guide

The Adobe FrameMaker 7.0 Solutions Guide is your complete FrameMaker 7.0 software resource. Use the Guide to identify the authoring and publishing challenges confronting your organization. Solutions, architectures and implementation details based on FrameMaker 7.0 are suggested.

The Solutions Guide also includes resources for new and existing FrameMaker deployments, including product evaluation advice, feature comparisons, migration strategies, and lists of thirdparty solutions providers.
